Smart Expense Splitter

A web app that splits a restaurant bill fairly between friends. Add friends, list the dishes, tap who ate what, and see exactly how much each person owes, with GST and service charge shared in proportion to what they ate.

Live demo: https://YOUR-USERNAME.github.io/smart-expense-splitter/

Features

- Add or remove friends
- Add dishes with price and quantity
- Assign each dish to one or more people (shared dishes are split equally)
- Adjustable GST and service charge percentages
- Per-person breakdown: food share, tax share and total
- Warning when a dish is not assigned to anyone
- Share the result on WhatsApp or copy it as text
- Works on phones and in dark mode

How the split works

1. A dish's cost (price × quantity) is divided equally among the people it is assigned to.
2. Each person's food total is multiplied by (GST % + service charge %) to get their tax share.
3. Person total = food share + tax share.

Run locally

Open `index.html` in any browser. No installation or dependencies needed.

Deploy on GitHub Pages

1. Push this repository to GitHub.
2. Go to **Settings → Pages**.
3. Under **Build and deployment**, choose **Deploy from a branch**, select `main` and `/ (root)`, then **Save**.
4. After about a minute the site is live at the URL above.

Tech stack

HTML, CSS, JavaScript (no frameworks).
